

Battery connections:

2. Document Battery set up then remove for charging:

The batteries were numbered and labeled, and connections documented prior to being removed for charging. One battery, #8 was left in place as removal would entail large scale dismantling of some structural members. #8 will be charged independently in situ. Each connector was also labeled with the battery number and polarity.

One removed the batteries were laid out on the workbench and re-attached in parallel for charging.
